PROPOSAL FOR Digital Humanities Certificate Capstone

Student Name: ____________________________________ UT EID: _____________

Student email address: ________________________________

Estimated graduation date: _________________________________________________

Capstone course number and title: _________________________________________________

Brief proposal title: _______________________________________________________

Capstone Supervisor/Instructor name and title: _________

Capstone Supervisor/Instructor email: __________________________

State: (1) a clearly stated objective and an overall description of the work to be performed; (2) a set of work activities, or the tasks you will complete on the way to the final deliverable, including methods as appropriate (e.g., focus group interviews, database searches, prototyping, experimentation, use of testbenches, or surveys); (3) a list of deliverables or outcomes, the expected culminating products of your work; (4) the criteria for evaluation of your work (e.g., on-time delivery, working functionality, thoroughness of research, responsiveness to others, or actionable recommendations); (5) a preliminary schedule with tasks and dates of completion; (6) work expectations (e.g., on-site attendance, meeting attendance, dress, availability, or social media protocol); (7) methods for monitoring project progress (e.g., weekly meetings with your supervisor, routine presentations, or regular emails to the department); (8) a set of learning objectives that specify what you will gain from this work, as in skills you will hone or knowledge you will gain; and (9) an explanation of how the project fits into your education (with courses specified). (Attach additional sheet if necessary.)

EXAMPLE: PROPOSAL FOR Digital Humanities Certificate Capstone

[Missing here is the student info and sponsoring organization information that you will fill out with your proposal; present here is the substantive content that follows that information.]

PROPOSAL

State: (1) a clearly stated objective and an overall description of the work to be performed; (2) a set of work activities, or the tasks you will complete on the way to the final deliverable, including methods as appropriate (e.g., focus group interviews, database searches, prototyping, experimentation, use of testbenches, or surveys); (3) a list of deliverables or outcomes, the expected culminating products of your work; (4) the criteria for evaluation of your work (e.g., on-time delivery, working functionality, thoroughness of research, responsiveness to others, or actionable recommendations); (5) a preliminary schedule with tasks and dates of completion; (6) work expectations (e.g., on-site attendance, meeting attendance, dress, availability, or social media protocol); (7) methods for monitoring project progress (e.g., weekly meetings with your supervisor, routine presentations, or regular emails to the department); (8) a set of learning objectives that specify what you will gain from this work, as in skills you will hone or knowledge you will gain; and (9) an explanation of how the project fits into your education. (Attach additional sheet if necessary.)

1. Project Objective

I am going to create a database to store and make accessible information regarding Texas butterfly specimens for [organization]. Currently, the 250 butterfly specimens are only available in display cases in Remote Library Branch. This project will determine a consistent means of cataloging the specimens and will provide access to this metadata via a database. Enabling online access to butterfly metadata will increase awareness and use of this collection for research, teaching, and hobbyist purposes.

2. Project Activities and Methods

I will undertake the following tasks:

- Review specimen collection and existing descriptive information.
- Interview stakeholders (library staff, zoology professors and students, members of the Austin butterfly collecting club) to determine access requirements to the collection.
- Conduct subject research on butterfly collecting and morphology.
- Develop metadata schema based on specimen and metadata review, stakeholder interviews, and subject research.
- Conduct review of metadata schema with project stakeholders.
- Implement metadata schema in database.
- Develop instructions for cataloging specimens with database.
- Review instructions with project stakeholders.
- Use specimen review, stakeholder interviews, and subject research to develop functional requirements for Web site to provide access to the database.

3. Project Deliverables

I will produce the following deliverables:

- A metadata schema for the Texas butterfly specimen collections.
- A database that implements this metadata schema.
- Cataloging instructions for generating metadata about each butterfly specimen.
- A set of functional requirements for a Web site to provide access to the database.

4. Criteria for Evaluation
The field supervisor will evaluate my deliverable based on:

- Comprehensiveness of the schema. For example, does it include all specimens in the collection?
- Ease of use. Does the schema make sense, and is the database easy to use?
- Clarity of instructions. Will future workers be able to generate metadata easily?
- Appropriateness of requirements. Are the requirements reasonable and achievable?

5. Preliminary Schedule

Although unforeseen events may alter our plans, my field supervisor and I propose this preliminary schedule. I will contact her immediately if work falls significantly off this schedule. I will complete the metadata schema in March, 2020; complete the database in April, 2015, and complete cataloging instructions and Web site functional requirements in May, 2020.

6. Work Expectations

- All work will be done at the [name place].
- The database and the Web site will reside at [name place].
- I will not require desk space at [organization].
- For the purposes of this project, I will be considered a volunteer.
- I will come to [organization] for meetings as the field supervisor and I deem necessary.
- The project will end [last class day of Capstone course for the semester].

7. Monitoring and Evaluating Student Progress

- I will email the field supervisor once a week to report progress.
- I will meet her bi-weekly to discuss progress and resolve any emerging issues.
- Changes to this statement of work will be approved by her and you.
- She will complete a final evaluation form that I will supply from the class.
- You have the final approval of credit or no credit for this project.

8. Specific Learning Objectives

At the conclusion of this project, I will have:

- developed user interviewing skills;
- translated my existing conceptual understanding of knowledge representation to a specific practical problem;
- strengthened my existing data modeling skills;
- built on my existing database implementation skills;
- developed skills in writing clear, complete cataloging guidelines; and
- developed skills in writing requirements documents that mediate between user and developer perspectives.

9. Fit with My Education

This project is a good fit with my courses in organizing information (384C), collection management (384D), and databases (385M), as well as with my less extensive work in archives (389C) and usability (385P). It brings together across these classes knowledge and skills that I have gained, but that I have yet to employ in consort in a realworld project.
